Your Earnings

SLX Node rewards are counted o your account wallet every 5 seconds (with every SLX Blockchain block).

Each Node generates of block rewards which equal ~0.41% daily profit or ~148% annually. This applies to its first year of operation. There is maximum amount set for every SLX Node that it can work out which is 148% per one year, and cannot exceed it (note: rewards can be multiplied by Auto-Stake feature).

Each Node works for 5 calendar years, each 1 subsequent year generating half of the profit from the previous year. What does it mean? This means that if the generated profit in the first year was 148% rewards in total, in the following years it will be 74% (2nd year), 37% (3rd year), 18,5% (4th year) and 9,25% (5th year). Therefore, the total profit obtained in the following years will be (in total).

Auto-Stake

Rewards generated from all SLX Nodes on Auto-Stake mode are accumulated and automatically (daily) reinvested into your Passive Wallet. Auto-Stake rises your total rewards in time, accelerating them day by day. This operation multiplies your account balances, and whats more, each of your SLX Nodes with enabled Auto-Stake mode qualifies you for additional rewards from HODL Bonus pools. Next is that, all the funds 'working' in the Passive Wallet work out rewards which are spendable and withdrawable. What does it mean? It means, that on Auto-Stake you multiply your coins by compounding interest and also have stable daily rising income.
