The creators of Trader income bot are an administrative team that has been operating and maintaining a Telegram channel and chat for many years, where most of the best earning schemes are described.

Over the years, many followers and students have appeared who have been able to improve their financial situation.

Income on futures

One of the most popular and fairly simple ways to earn money is trading futures through third-party signals. It does not require much knowledge, sufficient discipline and the ability to set trading signals observing risk management.

A trading signal is a forecast regarding the near-future rate of the selected cryptocurrency. The more accurate the forecasts, the more stable the income. Our group publishes all forecasts for free.

We take them from the best sources + our traders create them themselves.

For every person who wants to learn it, we offer absolutely for free:

Full video tutorials, support, trader advice, and an open chat that will help solve any issue.

We invite all the interested people, who have the strength and desire to learn money-making, to join our community.

Telegram channel - https://t.me/Trader_income_International

This trade requires constant user attention; the faster you react to the signal, the more you earn.

For a small commission, we can set these signals for those who do not have the time or knowledge for this.

There is intensive trading on the futures accounts of our traders every day.
Futures are both risky and profitable.

We use from 1% to 5% of the total deposit, which guarantees its safety.

We are going to explain. For example, the deposit is \$ 100,000 in total.
Three signals are coming out. We use 5% of the deposit for each:

The first signal is \$5000

The second signal is \$5000

The third signal is \$5000

A trading signal can bring both a loss and a profit; statistics say that 75% - 80% of signals produce a good profit, the other ones lead to a loss. It is not possible to forecast which signal will bring profit or loss

The signals worked:

- The first signal brought 80%, it's \$4000
- The second signal brought 30%, \$1500
- The third signal gave a loss of 70%, minus 3500 \$

**Total profit is \$2000. We calculate \$2000 from the total deposit amount of \$100,000
The total is 2%.**

We keep 15% of 2% as a commission. We send 10% to the referral system and leave 75% of profit to you.

Every evening, we record all profitable and unprofitable transactions, summing up the results; the average percentage is calculated.

All reports are posted on the company's channel during the day.

Thus, if you do not have the time or desire to set the signals yourself, then we can do it for you for small commission.

Investing, making a profit, and withdrawing funds is very simple.

We have created a special Telegram bot:
